

ATLAS

A dense, glass-based interface system in two themes. Rounded glass over navy light, one chartreuse for every action, 10px tracked labels against 46px tabular figures.

What this book holds

-
- 01 Philosophy — the three devices the system is built on
 - 02 The mark — the system drawn small
 - 03 Colour — a semantic layer over per-theme primitives
 - 04 Typography — Gabarito and Spline Sans Mono
 - 05 Iconography — Phosphor regular, six rules
 - 06 Geometry & density — the 1.75px unit, radii 6/10/14
 - 07 Glass — depth without shadow
 - 08 Data colour — six series, re-derived per theme
 - 09 Components & behavior — the built layer
 - 10 In use — three case screens

ATLAS is a product interface system, not a brand — there is no photography and no logotype beyond the mark. Its character lives in three structural devices: the index label, the glass panel, and the rule.

Two laws sit above everything. Components are built from the **semantic token layer only** — any raw hex in the component layer is a bug. And every measured claim is enforced: `tools/check_contrast.py` re-measures all 34 declared colour pairs in both themes on every run.

The three devices

01 THE INDEX LABEL

A 10px tracked mono label with a numbered accent prefix and a hairline running to the end of the column. Every block of content opens with one.

02 GLASS

Panels are translucent white over the navy with an 18px blur. A 1px sheen along the top edge stands in for elevation; nothing casts a shadow downward.

03 THE RULE

Ingest	48,210
Query	31,884
Exports	2,051

Inside glass, content separates with hairlines, never with nested cards. Figures sit in one divided panel, not in separate tiles. Tables are the primary surface, with an accent-tint hover instead of striping.

Three things were inherited from the reference system and everything visual is new: the 12–14px density, the 1.75px base grid, and mono numerics for every figure, reference and identifier.

The mark is the system drawn small

Construction

A raised-navy tile at the frame radius, three contour hairlines, and one chartreuse peak whose crossbar is the contour it crosses.

Two files

`mark.svg` is self-coloured and works on any ground; `mark-mono.svg` is `currentColor`, inline-only.

The lockup

Mark plus ATLAS in Gabarito 700 tracked 0.14em. The mark never appears without the name except as a favicon.

Dark — the theme it was designed in

GROUND
#0A1A2F

GROUND-DEEP
#061220

SURFACE · GLASS 5.5%
WHITE 5.5%

BORDER
WHITE 17%

FILL-ACCENT
#D4FF4F

TEXT-ON-ACCENT
#1B2405 · 14.0:1

TEXT-PRIMARY
#EEF3F8 · 15.7:1

TEXT-SECONDARY
#A9BACB · 8.8:1

TEXT-TERTIARY
#8698AC · 5.9:1

SUCCESS
#4ADE80 · 10.0:1

WARNING
#FBBF24 · 10.5:1

DANGER
#FF6B6B · 6.3:1

Every ratio is measured against the ground and enforced by the gate. All four text roles clear AA for normal text at 10px — the size the signature labels actually run at — with headroom kept for the light blooms beneath the glass.

Light — a remap, not an inversion

GROUND
#F2F5F8

SURFACE • FROSTED 58%
WHITE 58%

FILL-ACCENT
#C9F53C

TEXT-PRIMARY
#0D1A26 • 16.1:1

TEXT-SECONDARY
#46596A • 6.6:1

TEXT-ACCENT
#4A6606 • 6.0:1

Hairlines invert

On dark, lines are white at 10–26%; white-on-white has no edge, so on light they become navy at 10–26%.

Glass opacity climbs

5.5% white over pale grey reads as nothing; light glass sits at 52–90%, frosted rather than tinted.

The accent splits

Chartreuse works as a fill in both themes, but as type on a pale ground it measures 1.3:1 — so `--fill-accent` and `--text-accent` are separate tokens, and light drops the text cut to deep lime at 6.0:1. In light, the primary button's boundary is carried by `--border-accent` — the fill alone is 1.16:1 against the ground.

The jump is the character

A SPLINE SANS MONO · THE LABEL

48, 210

PB-2216 MARCH · RECONCILED

Everything numeric — figures, references, identifiers — is Spline Sans Mono, tabular. The system's character is the jump between 10px tracked labels and 46px tabular figures, with very little in between.

B GABARITO · THE INTERFACE

Close the month with the numbers shown

Gabarito carries headings, body and controls at 12–14px — dense on purpose; nothing is inflated to a comfortable-looking 16px. Scale: 10 / 11 / 12 / 13 / 14 / 16 / 19 / 25 / 33 / 46.

Weights 400–700; tight tracking (–0.03em) on display sizes, 0.1em tracking on the 10px labels.

Phosphor, regular, and six rules

1 Regular weight only

Never mixed with bold, fill or duotone — the mix is the fastest way to make a set look borrowed.

2 Sized in em

1.15em in line; standalone at 14 / 16 / 20 / 24px.

3 currentColor

An icon takes the colour of the text it sits with, never its own.

4 Never alone

Icon-only controls carry aria-label; decorative glyphs carry aria-hidden.

5 Never the sole carrier

A state is a tint plus a word; the icon repeats what the copy says.

6 No emoji

The 1.75px unit, radii 6 / 10 / 14

A SPACE

3.5 · 7 · 10.5 · 14 · 21 · 28 · 42 · 56 · 84. Invisible, unusual, and it works.

B RADII

Inner elements, panels and controls, then the app frame. Pill is reserved for tags, progress tracks and avatars.

C DENSITY & TOUCH

Controls run 28 / 34 / 42px. Touch surfaces floor targets at 44px — the 34px height is for pointer surfaces only.

. a-dense is one switch on a region: it tightens spacing, never type. Motion is 90ms and 170ms on one curve, and reduced-motion collapses both to 1ms.

Depth without a single shadow

01 A PANEL OVER LIGHT

The blur needs light behind it — dropped onto a flat fill, glass reads as grey mush.

UPTIME — P50 —

99.96% 84ms

Acknowledge

The sheen is the elevation

A 1px gradient along the top edge stands in for a shadow. The one box-shadow in the system is the glow on a hovered primary button.

The budget is a number

Six simultaneously visible blurred panels per view, the app frame counted once. Beyond that, group under one panel with hairlines.

The one forbidden thing

Glass never nests inside glass. Controls that live inside a glass panel — the theme toggle, the segmented control — are solid.

When blur is gone

@supports raises the fill opacity; forced-colors mode drops the blooms, sets glass to solid Canvas and hands the palette to the system.

Six series, re-derived per theme

A DARK — ALL $\geq$ 3:1 ON THE GROUND

B LIGHT — SAME SIX JOBS

Order is fixed

Series order never reorders per chart — a colour means the same series everywhere in a product.

Colour is never the only carrier

Trend direction pairs the colour with a sign; every series clears 3:1 against its ground, measured by the gate.

One signal per view

One flagged item, one primary button, one chartreuse emphasis. Attention is a budget, and the accent spends it.

● 2 OPEN

● OVERDUE

● CLOSING

⚠ Two exceptions open. Approve or reassign before lock.

Any hex here is a bug

The component layer touches only semantic tokens, so the same markup flips themes untouched — proven by the case screens.

The contract is written down

docs/BEHAVIOR.md fixes roles, states and keystrokes per component: tabs run roving tabindex with arrow keys, dialogs trap focus and close on Escape, invalid fields carry aria-invalid — the stylesheet keys its styling to those attributes, never to classes.

Focus is never removed

A 2px chartreuse outline at 2px offset, on every interactive element, following the element's own radius.

Three products, one language

OPS CONSOLE · DARK

MONTH CLOSE · LIGHT

PUBLIC STATUS PAGE · DARK

Deliberately different products — a sensor fleet, a finance close, a public status page — every one composed from components .css alone. To reskin for a new product: change the accent trio and the ground pairs, re-derive the text accent, run the gate. The semantic layer and every component follow untouched.

This book is generated from the living system — tokens, components and cases in the repository are the source of truth, and the contrast gate re-measures every colour claim on each run. All product data shown is invented placeholder.
